ZOOM UPHILL – USER GUIDELINES

BEFORE USING ZOOM UPHILL

- Do not exceed the total weight limit of 100 kg. For safety reasons, passengers are not allowed (including pets): the vehicle is designed to carry the driver only.
- The driver must be able to keep their hands on the handlebar, their legs away from the wheels and off the ground, and their back firmly against the seat backrest. Anyone unable to maintain the correct position or control of the vehicle should not use the ZOOM UPHILL vehicle.
- The recommended minimum age to use ZOOM UPHILL is 16 years. In such cases, waivers and authorizations are the responsibility of the parent/guardian.

WHAT YOU NEED

- The use of an approved mountain bike helmet is recommended. Drivers may bring their own or request a helmet—sanitized before each use—provided by the Archaeological Parks of Paestum and Velia.
- Wear appropriate clothing, tie back long hair, and ensure shoelaces are tied correctly and securely to avoid any risk of entanglement in the wheels or steering mechanism of the ZOOM UPHILL.
- Do not carry clothing, bags, or backpacks with dangling straps or loose objects on the vehicle to prevent any risk of entanglement in the wheels or steering mechanism of the ZOOM UPHILL.
- Have at least a basic understanding of traffic rules (similar to riding a bicycle).

STARTING. To start the vehicle, turn the key under the right handlebar grip clockwise and release the parking brake (if engaged, see below). Feet must be placed on the footrest before accelerating.

ACCELERATION. The speed selector is pre-set to the minimum value. The accelerator lever is located beneath the right handlebar grip. Push the lever forward to accelerate.

BRAKING. To brake, release the accelerator lever and pull the brake levers on the handlebar grips. The right lever brakes the front wheel, and the left lever brakes the rear wheel. When riding downhill, the use of the rear brake is recommended.

DIRECTION OF TRAVEL. The vehicle is steered using the handlebar, just like a standard bicycle.

USAGE. The vehicle must be operated with prudence and diligence, slowing down during direction changes and paying attention to obstacles, uneven surfaces, changes in elevation, as well as other visitors. When the vehicle is parked, turn the key counterclockwise and engage the parking brake (see below).

PARKING / STATIONARY BRAKE. The vehicle is equipped with a parking brake, which must be used whenever it is parked or left unattended. To engage the parking brake, squeeze the right brake

lever and push down on the upper part of the mechanism until it clicks into place, locking the lever. To release it, squeeze the right brake lever and pull the spring-loaded locking plate toward you to release the lever.
